for a one-sided up t test. These values depend on the degrees of freedom (left-hand column) and the chosen value α (numerical value of the Type I Error). For example, if there are 24 degrees of freedom and $\alpha = 0.05$, the critical value is 1.711.

The numbers in the chart below give the critical values (= critical points)

	t_{α}	t	Some manipulation is needed for one-sided down and two-sided tests.						
Degrees of Freedom	$\alpha = 0.10$	$\alpha = 0.050$	$\alpha = 0.025$	$\alpha = 0.010$	$\alpha = 0.005$	$\alpha = 0001$	$\alpha = 0.00005$		
1 2 3 4	3.078 1.886 1.638 1.533	6.314 2.920 2.353 2.132	12.706 4.303 3.182 2.776 2.571	31.821 6.965 4.541 3.747 3.365	63.657 9.925 5.841 4.604 4.032	318.31 22.326 10.213 7.173 5.893	636.62 31.598 12.924 8.610 6.869		
5 6	1.476 1.440	2.015 1.943	2.447	3.143	3.707	5.208 4.785	5.959 5.408
